

FOR IMMEDIATE RELEASE

January 8, 2021 – Boston, Mass.

World Energy is proud to be a longstanding global leader in the development of low-carbon fuels, and a prime example of the innovation and green energy breakthroughs the Low Carbon Fuel Standard (LCFS) is sparking in California. World Energy acquired AltAir Paramount, our renewable fuels facility in Paramount, Calif., in March of 2018. Following its acquisition, the company discovered that, while under previous ownership, production volumes at the facility had been incorrectly reported to the LCFS online reporting system. The company immediately reported the error to the California Air Resources Board (CARB) and corrected the issue. World Energy is fully supportive of CARB's resolution of this matter, its continuing efforts to maintain the integrity of the LCFS program and its mission to drive the world toward a more sustainable future.

World Energy is one of the largest and longest-serving advanced biofuel suppliers in North America. Founded in 1998, the company operates biodiesel manufacturing plants in Houston, Texas, Natchez, Miss., Rome, Ga., Harrisburg, Pa., and Hamilton, Ont. In Paramount, Calif. the company operates a renewable diesel refinery and the first commercial sustainable aviation fuel (SAF) facility in the world. The company also has distribution hubs throughout the U.S. and Canada. For more information, visit worldenergy.net.
